

CAEP Assessment Cover Form	Impact on P-12 Learning and Development: Value-Added Growth Measure, 2018-2020
Administration and Purpose	<p>The Ohio Department of Education (ODE) analyzes student progress using an Education Value-added Assessment System (EVAAS). Value-added analysis is intended to help educators and schools measure the impact they have on students' academic progress from year to year. Only public schools are required to track student performance and teacher effectiveness in this way, so the results here reflect a sample of EPP completers – those teaching in Ohio public schools.</p> <p>If value-added measures are available, then between 10% and 50% of a teacher's performance is evaluated using value-added measures, depending on how much of the individual's teaching assignment is dedicated to value-added courses. (If value-added measures are not available, 50% of the teacher's evaluation comes from an approved vendor assessment and/or a district measure.) Recently ODE has begun providing value-added data to EPPs through the Ohio Department of Higher Education (ODHE) to allow them to track the impact of their completers.</p> <p>More information can be found on the ODE website, https://education.ohio.gov/Topics/Teaching/Educator-Evaluation-System/Ohio-s-Teacher-Evaluation-System/Student-Growth-Measures/Value-Added-Student-Growth-Measure.</p>
Informing Candidates	Candidates learn about Ohio's value-added system and its relationship to the Ohio Teacher Evaluation System (OTES) primarily in their senior student teaching seminar. All candidates are required to successfully complete an online "Introduction to Value-Added Progress Metrics" module prior to or during their student teaching semester.
Content of Assessment	Ohio's value-added scores are based on public school students' standardized assessment scores. The assessments have changed three times in just a few years. Initially, students took the Ohio Achievement Assessment (OAA), which was replaced by Partnership for Assessment of Readiness for College and Careers (PARCC) when the Common Core State Standards were adopted by Ohio. Ohio abandoned PARCC after one year in favor of the American Institutes of

	<p>Research (AIR) system. Nevertheless, the EVASS reports explain that the models are robust enough to assure the validity of the results. (Also see http://education.ohio.gov/Topics/Teaching/Educator-Evaluation-System/Ohio-s-Teacher-Evaluation-System/Student-Growth-Measures/Value-Added-Student-Growth-Measure.)</p>
Scoring	<p>Teachers' value-added scores comprise, at most, 50% of their total effectiveness rating, with the remaining portion determined by observations and conferences to assess teachers' performance on standards. Value-added measures are derived from students' performance on state test, even when the tests have changed year to year as is in the case of Ohio.</p> <p>Ohio uses a gain-based model (Multivariate Response Model - MRM) when assessments are administered consecutively across grades or in a sequential pattern (reports for math and ELA, grades 4-8), and a predictive model (Univariate Response Model - URM) when assessments are not administered in a sequential pattern (reports for science, social studies, and high school end-of-course). (See https://portal.battelleforkids.org/Ohio/topics/value-added.)</p>
Data Validity or Survey Content	<p><i>Technical Documentation of EVAAS Analyses</i> (2017) including various elements value-added model quality of can be found here: http://education.ohio.gov/getattachment/Topics/Data/Report-Card-Resources/Ohio-Report-Cards/Value-Added-Technical-Reports-1/Technical-Documentation-of-EVAAS-Analysis.pdf.aspx</p>
Data Reliability or Data Quality	<p>Other documentation and related research can be found here: http://education.ohio.gov/Topics/Data/Report-Card-Resources/Ohio-Report-Cards/Value-Added-Technical-Reports</p>
Comments	<p>ODHE provides reports to the EPP that show the value-added results for completers. Given our small numbers, the smaller subset of completers teaching in Ohio public schools, and the parameters for EVAAS, the n reflected here is small relative to our completers. By viewing the data for the three cycles holistically we get a large enough n for patterns to emerge. That picture shows that about 64% of our completers' fall in the average, above average, or most effective levels. The high level of success indicates that all of our programs effectively prepare teachers to help students succeed academically.</p>

	*In 2019-2020, Value-Added Measures were not calculated due to COVID-19 and cancelation of state-mandated assessments.

Aggregated Value-Added Data 2017-2020

Reporting Year ^a	n	Value-Added Levels				
		<i>Most Effective</i>	<i>Above Average</i>	<i>Average</i>	<i>Approaching Average</i>	<i>Least Effective</i>
2017	18	22% (4)	11% (2)	39% (7)	11% (2)	17% (3)
2018	15	40% (6)	-	13% (2)	13% (2)	33% (5)
2019	19	37% (7)	5% (1)	21% (4)	5% (1)	32% (6)
2020*	-	-	-	-	-	-
Total	52	33% (17)	6% (3)	25% (13)	10% (5)	26% (14)

Note: 2017 was the first year value-added data was provided for both specific content areas, as well as a composite. Only composite scores are reflected here. Value-added levels are not provided for multi-age completers.

^a Because value-added levels are only calculated for grades 4 and up, the Early Childhood completers reflected here are only those who (1) opted to complete the requirements for the Early Childhood Generalist Endorsement enabling them to teach grades 4 & 5 and (2) were also employed in grade 4 or 5.

*In 2019-2020, Value-Added Measures were not calculated due to COVID-19 and cancelation of state-mandated assessments.

2017 Value-Added Data by Program

Program ^a	n	Value-Added Levels
